Modular design makes the EasyStand Evolv the most versatile standing frame available. The base unit is functional for many users, however when more support is needed a wide variety of positioning options can be added to accommodate the most involved user. The Evolv enables full extension at the hips and knees for those with sufficient range of motion (ROM) and full weight-bearing on the long bones of the legs. For those with limited ROM, sit to stand provides an opportunity to stand in a partial weight-bearing position and potentially progress to full extension over time.

**Safer**
- The three point system of padded knee pad, seat, and chest pad provides the individual with support in all positions from sitting to standing. Sit to stand also allows the user to ascend and descend at their own pace and the ability to stop anywhere between sitting and standing.

**Shadow Tray**
- Provides constant anterior support between sitting and standing, perfect for the individual with limited upper body support and allows standing in a partial weight-bearing position or stopping to rest/acclimate when needed.

**Quick Use**
- For those that self-transfer, it is a quick lateral transfer, flip the knee pad down and you are ready to start standing.

**Assisted Transfers Made Easier**
- For those that require an assisted transfer, several options ease assisted transfers such as swing-away fronts, removable backs, transfer and swivel seats, as well as elevated rear legs that allow more flexibility when patient lifts are needed.

**Comfortable**
- Critical areas are padded so the knee pad, seat, back and front pad are always well cushioned. Roho® seat cushions and knee pads are options for those with pressure management issues.
Advantage

Acclimated Standing
• Newly injured and those that have not stood recently often need to acclimate to standing. Sit to Stand allows a user to stop at any point between sitting and standing. This is also beneficial for those who have minor contractures in the knees and hips and allows them to be fully ranged out over time.

Full Hip and Knee Extension
• Allows for an over-center stretch of the hips and the full extension of the knees. This is ideal for achieving all the health benefits of standing.

Modular Design
• Accommodates both users needing little added support and those who require significant positioning to go from sitting to standing. Over 60 different positioning options, developed with advice from therapists, can accommodate the most severe disabilities. Additionally, disabilities such as Multiple Sclerosis and ALS are progressive, and positioning options may need to be added over time. Our modular design helps stand those with the most difficult positioning challenges.

Prepare for Exoskeleton Walking
• According to regulatory approval of exoskeleton products, prior to using an exoskeleton walking device, users should be able to stand using an assistive standing device (e.g., EasyStand Evolv). Being able to stand comfortably for longer periods of time and getting a proper stretch, makes the Evolv the ideal partner for pre-walking needs before starting a walking program.
Health Benefits

- Improve/maintain range of motion
- Decrease joint/muscle contractures
- Management of atrophy in the trunk and leg muscles
- Improve strength to trunk and lower extremities
- Decrease muscle spasms
- Promote proper muscle skeleton development
- Improve/maintain bone integrity/skeletal development
- Lessen/manage the progression of scoliosis
- Manage pressure (ulcers) through changing positions
- Improve bowel function and regularity
- Aid in kidney and bladder functions
- Strengthen cardiovascular system and build endurance
- Improve circulation
- Reduce swelling in lower extremities
